

CAREER DEVELOPMENT

PPG Industries

INTRODUCTION

In this poster I would like to talk about the career development that have been delivered by PPG on 28th October 2023

PPG Industries established on 1883-1968 and its headquarters is located in Pittsburgh, Pennsylvania, United States

PPG is stands for Pittsburgh Plate Glass Company

PPG's Headquarters

HIGHLIGHT

PPG have been given some lectures about so many important things for myself as a first year student to prepare before the internships or how to deal with various customer or client and more other topic. In my opinion, I feel like there are so many to learn and and need to be ready before applying any internship or maybe a job and not just blindly apply with a lack of skills and knowledges.

WHAT SKILLS SHOULD I GET?

Basically PPG have show me so many skills that i need to learn before enter any company. For example, like a technical skill. Technical skills that i need to improve myself with are actually a SQL skills, Data Modelling, Visualizations skill by using BI Tools and Programming Skills. With these skills i can make myself more worth to become an employee. Programming skills that PPG company uses is Python but they also said that C++ is good for beginner like for myself who only know some of the basics.

WHAT KNOWLEGDE SHOULD I LEARN?

Having a excellent skill is useless if we have a zero knowledge about it. Some of the knowledge the PPG taught to me is a Programming Skills, Database Concepts & Design and Data Modelling. I would to highlight the importance of Data Modelling knowledge. My job is actually to compile a big data to a simple way like a chart for the other people can read it. Therefore, I need focus on myself to learn more about programming knowledge from now.

WHAT I NEED TO DO IMPROVE AND PREPARE MYSELF FOR THE FUTURE?

First thing first, my action after hearing those lecture from PPG is that i need to focus on improving my skills whether my soft skills or programming skills. These skills will help me to contribute more when working on someone industry.

Next, my aims for future is to help other people like for my clients or to my company as may as i can. With the knowledge and experience that I will get, I probably will create a software the will make other people job easier to do.
